

Radiant Tube Inserts

The Simplest Way to Increase Furnace Performance 10-20%

Why Choose Radiant Tube Inserts?

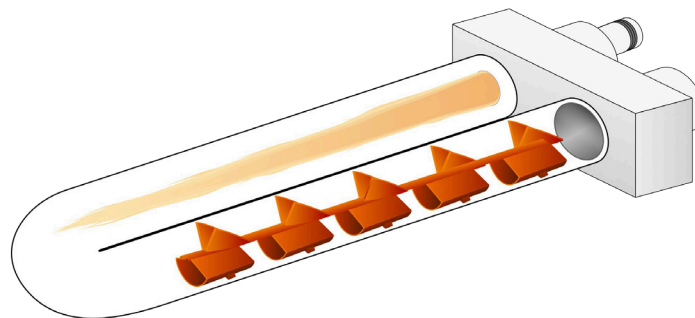

Increase Productivity

- Comprised of Silicone Carbide resulting in near perfect emissivity and optimal radiation performance
- Quick and easy retrofit installation captures and redirects wasted energy, increasing tube life and BTUs per load without blocking airflow
- Reduce heat up time and maintain zone temperature
- Inserts work with or without recuperators

Reduce Emissions

- Patented design shell shape collects exhaust gasses and shifts energy back into the load, decreasing overall emissions, including NOx and CO
