

# Combustion Training

## What to Expect:

Custom training and hands on learning taught by expert engineers; Consisting of 2 sessions.

### First Session: Classroom Training

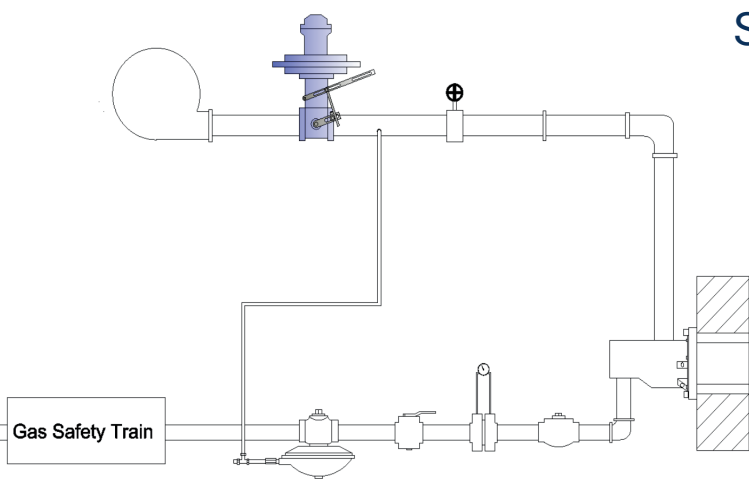

- Grasp furnace and combustion fundamentals, including the importance of heat transfer and how it affects your furnace combustion safety and the chemistry behind the flame
- Understand how to apply these fundamentals to your own furnace when making adjustments, and why they matter

## Custom Training to Master Your Furnace

### Second Session: Hands-on Training

- Review your furnace with an expert service engineer while learning proper fire rate, line speed, and furnace efficient calculations
- Ensure proper knowledge of your furnace control system, valves, and combustion components with a hands on furnace walk
- Learn appropriate application with a tuning demonstration on how to balance zones and tubes, and set air-fuel ratio

**Your Experts in Combustion Technology**
